- ✓ Inventory and stock management to remain up-to-date with your stock
- ✓ Feature-rich, highly customized, advanced reporting system
- ✓ Built-in financial accounting to keep track of all your transactions
- ✓ Handy Item Modifiers for whenever you need side orders with the main items

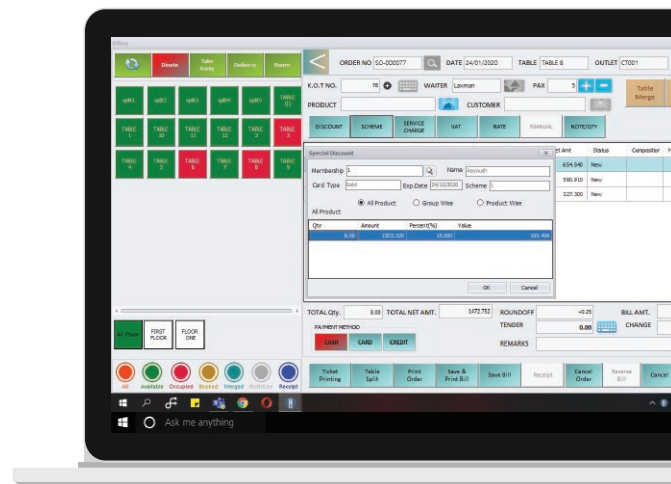

Membership Management

SWASTIK - Restaurant POS holds multiple features of membership. The regular guests can get membership with the restaurant. With this excellent restaurant management software, the owner of the restaurant can easily manage the membership of the guests in three different categories.

At the same time, the owner can also define membership or the staff.

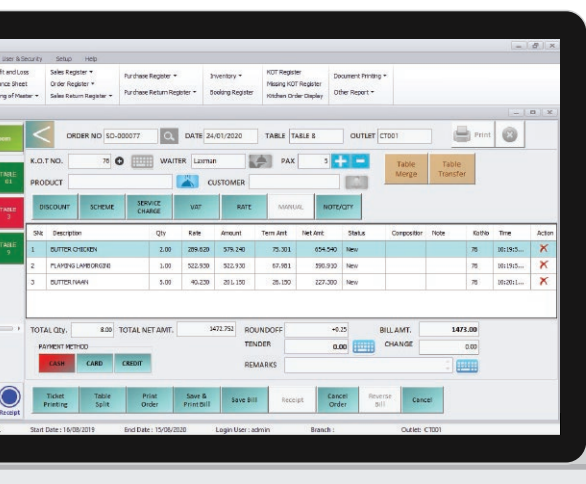

With SWASTIK Restaurant POS, the owner can define the discount scheme in an effective & efficient way. For example, the discount rate for the members with Gold Membership can be allocated as a 20% discount on KOT & 10% on BOT. Similarly, the owner can allocate 25% discount on KOT & 15% on BOT for the members with Platinum Membership in your restaurant.

Point Of Sales

The 'Operation Mode' in SWASTIK - Restaurant POS provides the user with four different operation modes in its Point Of Sales. These modes can be accessed easily right from the main dashboard. This helps in increasing the speed of the service by preventing the chances of making errors in the types of orders to be processed. It has very easy facilities to choose from dine-in, delivery, room-service and take-away.

This makes the task easier for the staff to track the order type and also simplifies the whole process. At HiTech, we believe that our real work starts after we hand-over our products to our clients. Above all, we are fully committed to serving all our customers with quality, skilled and personalized local support to give them the best out of their valuable expenses.

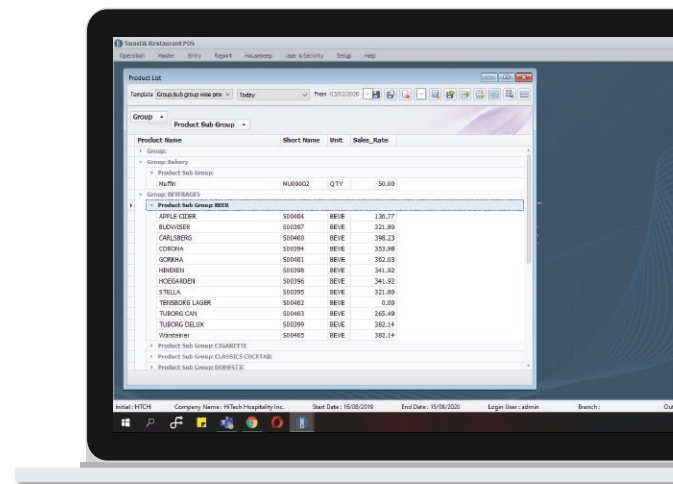

Menu Management

SWASTIK - Restaurant POS features a multi-level menu management system. With this feature, users can define as many products as they want. This feature also allows them to add details about their products using image & composition. Besides, this software also provides the features of menu-grouping & categorization for a better analysis report. Most of all, this feature also works the best for tablet modules that help in saving the overall

order processing time. As a whole, Swastik - Restaurant POS has everything that is required for an effective and efficient management of all the menus of a POS (Point of Sales).

You don't have to deal with anymore hassle or hurdles and speed up your workflow to be very efficient.

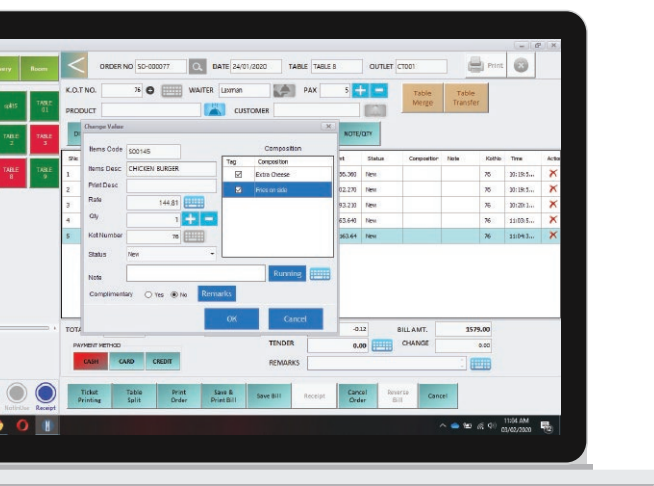

It is as simple as that.

Item Modifiers

SWASTIK - Restaurant POS has the feature to add any number of modifiers (composition) in the system where each item can have its own individual side-order. Likewise, the modifiers can be configured to either of the optional or mandatory depending upon the setting and the item selected. Here, the waiter must select the side-order in order to avoid any further mistakes.

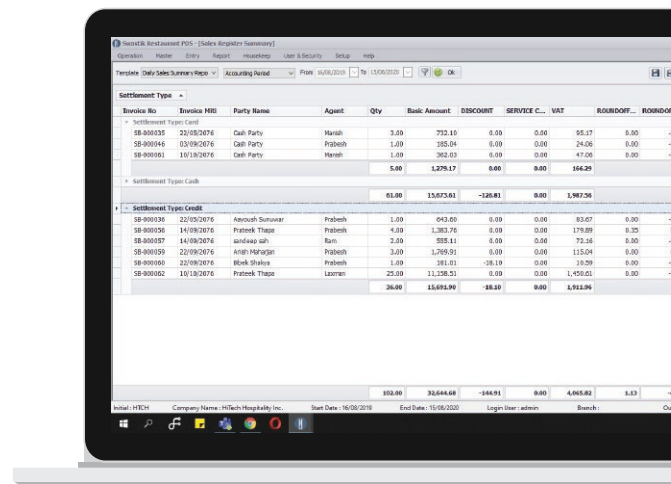

The 'Item Modifier' module has been specially included in Swastik - Restaurant POS in order to solve the problem of being limited while running restaurants and similar hospitality businesses. This has helped the waiters and other staff members of the restaurants in getting rid of the frequent calls from the clients and customers about the items to be added.

Advance Reporting

The Point Of Sales from SWASTIK - Restaurant POS has an especially customized and advanced reporting feature. The report provides space for Table Status, Order Status and Details. Likewise, this restaurant management software also provides an option to show the kitchen report, sales report and counter summary. With this restaurant management software, the owners of the restaurants can define as many templates as they want and

that for all the reports. The filter option can be defined for any field in the report. In this context, one of the most important features of this software is that it is designed with respect to any future amendments in the revenue system of the country. This module eases down the whole process of running a restaurant to a greater extent than anyone could ever imagine.

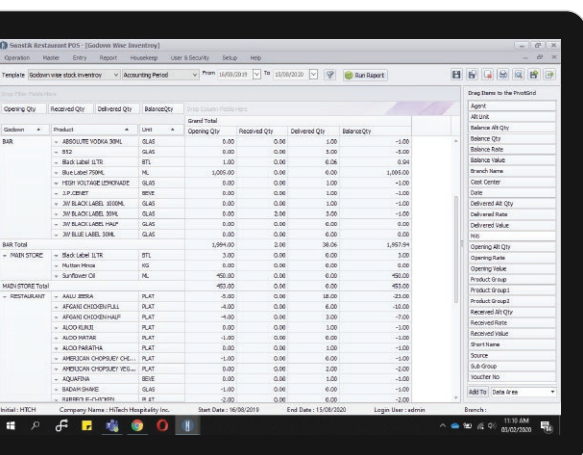

Inventory & Stock Management

SWASTIK - Restaurant POS has been successful in standing on the topmost position in the list of top-class accounting and inventory management software packages. Indeed, this software has a truly outstanding Inventory Management System. It easily allows the users to set the minimum & maximum levels of stocks for each product separately. Similarly, there's also a feature of re-ordering the products. Purchase Order, In-purchase, GRN

(Goods Receipt Note) and Invoicing options are also available with this stock management software. The users can easily add the extra expenses on a purchase through the additional Purchase Invoice. SWASTIK - Restaurant POS has a Store Management System that consists of Stock Transfer, Inventory Management Issue, & Finished-Goods Receipt Option.

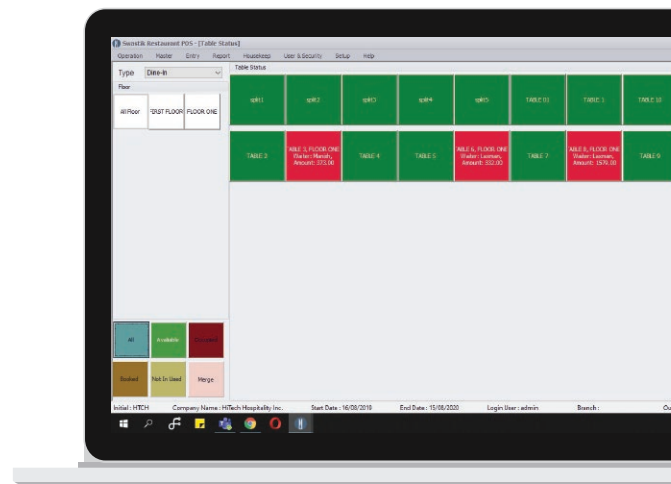

Kitchen Display System

SWASTIK - Restaurant POS is also powered with a Kitchen Display System (KDS) feature. With this, the staff working inside the kitchen can get live updates about the orders taking place. This feature helps reduce the errors and speeds up the serving time. At the same time, KDS also improves the relation between the front-staff and the staff inside the kitchen. As soon as the front-staff get the orders from the customers, the kitchen-staff

update them about the status of the orders. When the order is ready to be served to the customers, the staff inside the kitchen passes the information which goes directly to the waiter. There is a separate message center for all the staff to communicate internally with one another for each and every transaction to be made.

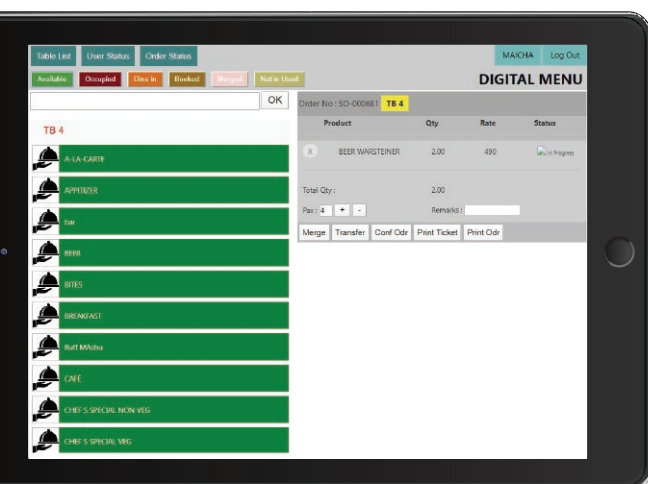

Tablet Module

Tablet Module is a special feature of the restaurant management software named as SWASTIK - Restaurant POS. It's available in the tablet version. This feature-rich software allows the waiters and restaurant-managers to deal very easily with the task of taking orders from the clients directly from the tables using their tablets. SWASTIK - Restaurant POS requires no paper for the waiters to process the orders from the clients. As soon as the

orders are taken from the clients, the staff in the kitchen and at the counter are automatically notified. Being a completely touch-enabled software, it has an excellent work-flow like a shopping cart.

This amazing software converts a complete order easily and thereby makes the whole process of delivery an easy-to-deal task.
